

THE NEXT GENERATION OF REFRIGERATION EQUIPMENT FOR A2L'S IS HERE!

Outdoor Condensing Unit

Safety shut-off valves are shipped loose with the evaporator and field installed outside of the walk-in cooler/freezer.

Evaporator

ADDED COMPONENTS
For Leak Detection and Mitigation System

Leak sensors are pre-installed and mounted in the evaporator.

Mitigation strategy incorporated into our ESP+ controller.

WE ARE PREPARED!

Our factory-installed leak detection and mitigation strategy incorporates the safety mechanisms required for A2L refrigerants. This low GWP new generation of equipment will be easy for today's technicians to service.

Our A2L equipment is designed for R454A, R454C & R455A refrigerants.

Trenton systems meet the January 1, 2026 requirement that all new commercial refrigeration products use a refrigerant <300 GWP (R-454A) for systems under 200 Lbs. and <150 GWP (R-454C & R-455A) for systems above 200 Lbs.

Our equipment will be ready to order once final certifications are completed.

Ask your local United Refrigeration to schedule training today.

Brantford, Ontario – Longview, Texas
